

EXPERIENCE

We are very thankful to Infostretch Solutions to provide us good support and nice environment during my training period. All the employees were very co-operative and helpful.

Throughout the process, we enjoyed working with the organization and it was a great learning experience. We had the privilege of going through entire Software Development Life Cycle right from the requirements gathering phase.

Working with a globally renowned company, was a great learning experience to learn their standards and application areas. This company has widened our horizons of knowledge to a very large extent. Till now we were exposed only to the theoretical side of learning. With this project we have attained a lot of understanding from the practical point of view.

This immeasurable knowledge gaining experience for me has already sown its seeds into our career and we hope to carry it with us throughout our professional life.

This firm has not only helped us to develop ourselves as a programmer but as an individual by letting us realize our potential and believing in our capabilities and hence boosting our confidence.

This project will always remain an integral part of our resume and we hope my wonderful experience here would provide a boost in our career as well.
